## Ozone Cabinet

£5,150

A transportable ozone deodorising cabinet that effectively eliminates odours from clothing, footwear and accessories — ideal for uniform suppliers, theatres, retail and other environments where bulk odour removal is needed.

### Description

#### A transportable ozone deodorising cabinet for clothing, footwear and accessories

The Ozone Cabinet produces up to **10 Gm of Ozone per hour** using our UK Designed and Manufactured Ozone Module to neutralise persistent odours and freshen garments and textiles rather than simply masking smells. Its robust design includes hanging rails, shelves and programmable cycles that tackle low, medium and heavy odours, making it an effective solution for businesses that need reliable, non-chemical odour removal.

Mounted on castors for easy movement, the cabinet can be used wherever there's access to a standard electrical socket. **With all ozone generation and destruction handled internally — removing the need for external ventilation.** Designed to support diverse commercial sectors, the Ozone Cabinet simplifies deodorisation work-flows and delivers cleaner, fresher items on demand.
